PROFESSIONAL SUMMARY

Junior Data analyst at Absa (PPB) turning banking data into commercial decisions. Advanced SQL and Python (pandas, PySpark) on Databricks, with a record of analysis that moved revenue, cut churn and replaced week-long manual processes with automated reporting. Background as a Technical Analyst, with strong banking domain knowledge and a focus on insights stakeholders can act on.

EXPERIENCE

Junior Data Scientist, Absa (PPB) *12 / 2025 to Present*

- Led a cash-send analysis whose findings identified millions of revenue; method: campaign target based.
- Automated collection of fixed deposit rates across all South African banks, cutting turnaround from one week to 5 minutes; the output is used by the pricing team to inform interest rate changes
- Built a customer segmentation (UMAP + K-means) on PPB data, producing actionable insights that improved customer stickiness and significantly reduced churn by 30%
- Delivered 10 analyses and dashboards in Power BI to 4 stakeholders supporting decisions on revenue generation.
- Built and maintain production Databricks pipelines in PySpark and SQL

Technical Analyst, Absa

- Automated data process with Python and playwright saving 40 hours per week
- Wrote advanced SQL for extraction, reconciliation, reporting across systems
- Built banking domain knowledge across PPB business houses and financial banking.

SELECTED PROJECTS

- **Cash-send Analysis:** analysis that surfaced millions in revenue improvement.
- **Bank Interest Rates Tracker:** automated Databricks system replacing a week-long manual process with a 5-minute run across all SA banks; used by the pricing team. Alerts the pricing team daily when interest rates changes from SA banks.
- **Product Stickiness Analysis:** customer segmentation that identified at-risk groups, leading to targeted actions that reduced churn.

TECHNICAL SKILLS

Analysis and reporting: advanced SQL, Data modeling, dbt, advanced data analysis, stakeholder reporting, Power BI

Languages: SQL, Python (pandas, NumPy), PySpark

Platforms: Databricks, Git, GitHub,

Techniques: customer segmentation, cohorts, A/B testing, causal inference, data cleaning, basic ML, CI/CD, Applied AI engineering

EDUCATION

BSc Mathematical sciences, Statistics and Computer Science, University of Limpopo *[2024]*
